DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-23 are, drawn to solid liquid crystal phospholipid compositions, classified in class 514, subclass 78.
 - II. Claims 24-32 are, drawn to a process of making the composition by extruding, classified in class 264, subclass 13.
2. The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by evaporation of a solution of granular lecithin and the active agent in a solvent and direct compression into desired product; or by any conventional method of making proliposome powders containing active agents and compressing and extruding the powders to the desired shape.

4. **Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.**
